SKILLS

Frontend

React 19, TypeScript, JavaScript
Next.js 16, React Native, Vite
Tailwind CSS v4, Zustand
TanStack Query, shadcn/ui
Radix UI, Framer Motion, Three.js

Backend

Python, FastAPI, Hono, Django
Node.js, Bun, Pydantic
REST APIs, GraphQL, WebSockets
SSE Streaming, Auth (JWT, OAuth)
Celery, asyncio

Databases & ORM

PostgreSQL, MySQL, SQLite
Supabase, Redis
Drizzle ORM, Prisma

AI & Automation

LLM Integrations (OpenAI
Anthropic, Bedrock)
Multi-Agent Architectures
Prompt Engineering, Playwright
ETL Pipelines, Pandas, NumPy

Cloud & DevOps

AWS (EC2, S3, RDS, Lambda
SageMaker, CloudWatch)
Docker, Terraform, CI/CD
Vercel, Fly.io, Railway
GitHub Actions, Linux

Tools & Testing

Git, Electron, Vitest, Jest
pytest, @testing-library/react
Zod, npm Workspaces
Postman, Figma, Jira

EDUCATION

George Mason University

M.S. Computer Science, 2024 – Present

James Madison University

B.S. Computer Science, 2020 – 2024

Summary

Full-stack engineer who ships production systems end-to-end — React 19 and TypeScript on the frontend, Python and FastAPI on the backend, PostgreSQL underneath. Currently building multi-agent AI systems and LLM-powered automation pipelines. Pursuing M.S. Computer Science at George Mason University.

Experience

Eigennet

2024 – Present

Software Engineer — Reston, VA

- Engineered LLM document extraction pipeline on AWS SageMaker achieving **99% accuracy**, processing **10K+ pages/day** and reducing manual review by **85%**
- Automated Python SFTP delivery pipeline (metadata packaging, zip creation, encrypted transfer), delivering **500+ classified documents monthly** with **99.7% success rate** and eliminating **20+ hrs/week** of manual work
- Implemented EC2/S3 batch workflows with API-driven transmission tracking, reducing delivery errors by **90%**
- Designed Django validation pipelines detecting schema drift pre-delivery, preventing downstream data failures across partner systems

Freddie Mac

2023

Software Engineering Intern — McLean, VA

- Designed Java data validation tool detecting anomalies and schema drift across large financial CSV datasets, reducing reconciliation effort by **60%**
- Implemented automated version-mismatch alerts, catching **3x more** data integrity issues before production
- Accelerated quarterly reconciliation from **2 weeks to 3 days** through automated CSV comparison workflows

Projects

Embark

embark-theta.vercel.app

[React](#) [TypeScript](#) [FastAPI](#) [Python](#) [Supabase](#) [Vercel](#)

- Developed full-stack productivity platform with RPG mechanics serving **50+ active users** — XP progression, quest engine, rarity-tiered item collection, and real-time leaderboards
- Architected event-driven FastAPI/Supabase backend with WebSocket endpoints for live quest and progress updates

Cinetik

cinetik.app

[React](#) [TypeScript](#) [FastAPI](#) [Python](#) [PostgreSQL](#) [TanStack Query](#) [Zustand](#)

- Developed full-stack media tracking platform integrating the TMDB API with TanStack Query and Zustand state management across **500K+ catalog records**
- Optimized PostgreSQL query patterns and indexing strategy achieving sub-100ms response times with a responsive Tailwind CSS interface

Agni

github.com/dballard10

[React 19](#) [TypeScript](#) [Electron](#) [FastAPI](#) [Supabase](#) [Vite](#)

- Developed cross-platform notes and planning app for desktop (Electron) and web using a shared React 19 codebase in an npm workspaces monorepo with domain-first layered architecture

Shipkitty

github.com/dballard10

[React](#) [TypeScript](#) [Hono](#) [Bun](#) [Drizzle ORM](#) [PostgreSQL](#) [shadcn/ui](#)

- Architected AI agent observability dashboard with Hono/Bun backend, Drizzle ORM, and PostgreSQL — real-time session monitoring, replay, and undo support
