## EDUCATION

- George Mason University**  
M.S. Computer Science, 2024 – Present
- James Madison University**  
B.S. Computer Science, 2020 – 2024

## CLEARANCE

Public Trust: Tier 2 Moderate Risk, favorable adjudicated

## SKILLS

### Frontend Development

React, TypeScript, Next.js, Vite  
Tailwind CSS

### Backend Development

Python, FastAPI, Node.js, Hono  
SQL, PostgreSQL, Drizzle ORM  
RESTful APIs, Google OAuth  
Async Processing, Pandas

### Cloud & DevOps

AWS (EC2, S3, RDS, Lambda)  
Vercel, Railway, Fly.io, Docker  
Bash / Shell Scripting  
CI/CD (GitHub Actions)

### Tools & Collaboration

Cursor, VS Code, Git, GitHub  
NPM, Obsidian  
Figma (UI/UX), Agile  
Testing (Jest, Pytest, Vitest  
Playwright)

### Agentic Development

Claude, Codex (subagents, hooks, skills)  
MCP server development  
Agentic Orchestration  
Prompt engineering  
RAG, vector databases

## Summary

Full-stack engineer who thrives on ownership and building real products from zero to production. I build fast, scalable products with React, TypeScript, FastAPI, and PostgreSQL, and I'm finishing my M.S. in Computer Science at George Mason University.

## Experience

- Eigennet (IRS, OPM)**2024 – Present
- Software Engineer
- Supporting a large-scale document-processing modernization effort
  - Engineered an AI-powered extraction pipeline (Python, FastAPI, Claude) to process 1 million+ documents, significantly reducing manual processing time
  - Own and developed an end-to-end automated transmission system for file packaging, data integrity checks, and SFTP delivery, ensuring reliable transfer of 1 million+ files
  - Maintained and enhanced Doc2Data, a full-stack web app (React, TypeScript, FastAPI) enabling non-technical users to manage and update extracted data
  - Experience using and managing AWS EC2, S3, Lambda, and more

- Freddie Mac**2023
- Software Engineering Intern
- Developed a Java-based data validation tool to detect anomalies and schema drift across large financial CSV datasets for the financial engineering team

- Criterion Systems**2022
- Software Engineering Intern
- Developed a VBA-based Excel tool to validate 1,700+ records, enabling non-technical users to quickly identify and correct formatting errors

## Projects

- CURRENT
- Selas**selas.dev
- TypeScriptReactHonoPostgreSQLMCPOAuth
- Built and shipped Selas, a production knowledge management app where users capture markdown entries, organize them into volumes and collections
  - Designed an MCP (Model Context Protocol) server that exposes each user's archive to AI clients like Claude and OpenAI
  - Architected a transport-agnostic capability layer so REST routes and MCP tools share the same canonical data operations, eliminating drift between API surfaces
  - Deployed a TypeScript monorepo across Vercel (landing + web app) and Railway (Dockerized Hono API) with Neon Postgres, Drizzle ORM migrations, and Google OAuth via Better Auth
  - Maintained quality with CI/CD on GitHub Actions: typechecking, Vitest unit/integration tests, and Playwright end-to-end tests on every push

- PAST
- Cinetik**cinetik.app
- ReactTypeScriptTMDB APITanStack QueryZustand
- Developed a media exploration platform enabling users to search and filter movies and TV shows via the TMDB API
  - Implemented efficient data fetching and caching with TanStack Query and managed global state with Zustand
  - Designed a clean, intuitive UI for seamless media exploration and detailed content views
